

Monkey Upload

Monkey Upload enhances your Microsoft Dynamics CRM system by improving file management capabilities at the record level. It will benefit you in the following ways:

- Your time is saved through an intuitive user interface, which makes it easy to upload, delete, download or view file details
- Storage space is saved through file compression techniques
- The file manager can be added to any entity form (even if notes are disabled)

How does it work?

Once Monkey Upload is added to the form, CRM users can open a record and begin using the file manager to upload, view, delete or download any type of file.

It's really that simple!
